SUMMARY

Seasoned Full Stack Engineer with 6+ years of experience developing scalable, reliable, and fault-tolerant cloud-based applications. Proficient in architecting and maintaining complex systems that serve thousands of customers in the IoT, digital signage, and real estate domains. Skilled in AWS deployment and proven track record of delivering high-performing software solutions.

WORK EXPERIENCE

Senior Software Engineer

February 2024 - Present

Mosaik

US/Remote

- Integrated multiple third-party real estate MLS systems by developing reusable frontend and backend components.
- Optimized the codebase by creating reusable classes that encapsulated shared functionalities, slashing integration time from 2 weeks to 3 days.
- Developed APIs to synchronize real-time data from third-party MLS systems.
- Built an automated testing utility that generated CSV files to help developers debug data mapping issues.
- Utilized PostGIS to develop APIs for property and location boundary data.
- Integrated third-party APIs, such as GreatSchools, to provide nearby school data.
- Developed location API integrations using ESRI to convert geocoordinates to location names.

Senior Software Engineer

June 2023 - February 2024

Neon Screens

US/Remote

- Engineered a highly scalable API using AWS to manage 100,000 screens with a consistent 3-second response time, irrespective of screen count.
- Directed the development of a hotel screens product, seamlessly integrating multiple third-party services using Python and Django.
- Architected and built a unified service using MySQL to streamline menu-based integrations from multiple providers, reducing integration time from weeks to days.
- Revamped the role-based authorization system, empowering fine-grained, micro-level control across the application using Docker.
- Constructed a real-time data pipeline that aggregates data from Firebase, utilizes BigQuery for analytics, and monitors deployed screens to calculate usage for accurate billing.

Senior Solutions Architect

April 2020 - August 2023

Invisible

UK/Remote

- Engineered a profitable IoT product leveraging cutting-edge technologies, including RabbitMQ, Kafka, AWS, Docker, Docker Compose, and Socket.io, to drive exclusive revenue.
- Spearheaded the full-cycle development of a streamlined IoT solution process, enabling the creation of custom IoT products in just two minutes, boosting customer adoption and satisfaction by 50%.
- Architected a scalable, efficient, and secure IoT solution, delivering a 75% reduction in infrastructure costs.

Computer Vision Engineer

April 2019 - April 2020

Sync & Secure

Lahore

- Engineered an innovative receipt reader and face recognition-based attendance system using Python, OpenCV, and AWS AI services, delivering a 100% increase in attendance accuracy and saving clients thousands of hours.
- Collaborated with cross-functional teams to integrate computer vision solutions powered by LLaMA, reducing development time by 50% and boosting user satisfaction by 25%.
- Delivered over seven end-to-end projects, including Smart Attendance, Cold Chain Monitoring, and CNC Monitoring, using Django and MySQL to streamline project management and data storage.

EDUCATION

BS Electrical Engineering
The University of Lahore

June 2018

SKILLS

Key Skills: Node.js, NestJS, GraphQL, Microservices, RabbitMQ, Kafka, Redis, MongoDB, PostgreSQL, MySQL, Express.js, WebSockets (Socket.io), REST APIs, Serverless, Firebase, GCP, Azure, Big Query, React.js, Next.js, Vue.js, Redux Toolkit / Zustand, SEO, Server Side Rendering, Internalization / Localization, AWS, Docker, CI/CD, Linux, Nginx, Docker Swarm, TypeScript, JavaScript, Git, OOP, Technical Leadership, Jira, Github Problem Solving, Agile Software Development, Scrum, IoT, Adaptability, Mentoring, Unit testing, Blockchain, End-to-end testing, Python, Django, AI, LLaMA, Stripe
